The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the X-ray powder diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *European Journal of Mineralogy* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

NEW MINERAL PROPOSALS APPROVED IN DECEMBER 2016

IMA No. 2016-083

Potassic-magnesio-arfvedsonite

KNa₂Mg₄Fe³⁺Si₈O₂₂(OH)₂

Buhovo-Seslavtsi pluton, Sofia district, Bulgaria (42°47'N, 23°34'E)

Momchil Dyulgerov*, Bernard Platevoet, Roberta Oberti, Milen Kadiyski and Ventsislav Rusanov

*E-mail: momchil@gea.uni-sofia.bg

Amphibole supergroup

Monoclinic: C2/m; structure determined

$a = 9.986(2)$, $b = 18.022(3)$, $c = 5.3151(12)$ Å, $\beta = 104.44(2)^\circ$

8.519(87), 3.406(82), 3.172(72), 2.755(59), 2.716 (100), 2.594(52), 2.551(68), 2.175(57)

ADDENDUM

Potassicmendeleevite-(Ce) (not a valid species)

Although erroneously marked as "A" (= Approved) in the IMA List of Minerals for some years, only recently we became aware that actually the mineral has not yet been approved (only the name was approved). Accordingly potassicmendeleevite-(Ce) has been omitted from the list of valid species.

REVISED CHEMICAL FORMULA

A paper on the mineral nickelskutterudite has been published recently [*American Mineralogist*, **102**, 205–209 (2017)] in which the ideal chemical formula of the mineral is given as $(\text{Ni}, \text{Co}, \text{Fe})\text{As}_3$. In this formula, based on new EPMA and SCXRD data, and on crystal-chemical arguments, both Co and Fe must be present as subordinate yet essential components, and no As deficiencies were observed (the previously accepted formula of nickelskutterudite was NiAs_{3-x}). These data were examined carefully by the CNMNC officers and were considered reliable. Accordingly it was agreed to modify the formula of nickelskutterudite in the official IMA List of Minerals. Similarly, the formula of skutterudite becomes now CoAs_3 (it was CoAs_{3-x}).
